

BIOSTIMULANT

Biostimulant consortium of beneficial micro-organisms

CLICK is the first biostimulant in tablet form containing mycorrhizal fungi (Glomus intraradices), Trichoderma atroviride, rhizosphere bacteria and organic matter biologically active.

It stimulates metabolism, improves plant development, increases yield and fruit quality. It also enhance crop resistance to climatic stresses. Starter effect.

COMPOSITION

Mycorrhizal fungi (Glomus intraradices)	250 spores/tablet
Rhizosphere Bacteria	1x10 ⁷ UFC/g
Trichoderma atroviride	1x10 ⁸ spores/g
Formulation	tablet (4.5g)

It does not contain genetically modified organisms or pathogenic organisms.

USE AND DOSE

To ensure a good effect, place the product where it can be the most in contact with the roots. We recommend to apply at transplantation.

Horticulture under greenhouse: 1 tablet / plant

New vineyards: 2 tablets / plant

Fruit trees (apple, peach,...): 2 tablets / plant

Nursery and ornamentals 1 or 2 tablets / plant considering plant size.

ACTIONS AND BENEFITS

- increase of yield and harvest quality,
- starter effect,
- biostimulant action,
- activation of soil micro-organisms,
- uniform plant growth and root system,
- it hinders the development of soil pathogens,
- better effectiveness of fertilization,
- greater resistance to water stress and salinity,
- it improves soil fertility and vitality,
- very simple application.

WARNINGS

The application of fungicides and chemical phosphate fertilizers may slow down the development of mycorrhiza. Do not use on: Rhododendron, Azalea, Lauro, Orchids, Fir, Hazel, Robinia, Pinus, Brassicaceae and Chenopodiaceae. Store the product in cool and ventilated place, away from direct sunlight and high temperature.

PACKAGING: 500 and 1500 tablets.
